

WEATHER NOW!

STOPPING THE CRISIS IN ITS TRACKS

PROACTIVELY MITIGATING SITUATIONS IN REAL TIME

Part of our suite of Adaptive Intelligent Controls, Weather NOW!™ allows the CentrAlert C-DAC to automatically send preset weather crisis warning messages to specific people via any communication channel. Weather NOW! can then be combined with CentrAlert's patented Advisor Alert Radio™ (which is the only alert radio that can provide an NOAA receiver AND a local receiver) to allow localized control of escalating events.

Weather NOW! receives information directly from the National Weather Service (NWS) or National Oceanic and Atmospheric Administration (NOAA), unlike other applications that rely on third-party interfaces to receive their weather data.

Operational Features

- Send targeted weather warning alerts via text, email, pop-up, voice call or social media
- Ability to communicate with physical communication channels like sirens, message reader boards, strobes and more
- Send targeted "All Clear" alerts after any major weather event
- Available modes include Automatic (which requires no human interaction) and Manual (which provides prompts to the operator)
- All data comes from National Weather Service or National Oceanic and Atmospheric Administration
- Ability to pair with Advisor Alert Radio for localized control of escalating events

Other CentrAlert Adaptive Intelligent Controls

- Oil and Gas Alert
- Dam Breach Detect
- Lightning Detection
- Access Protect
- Live Alert Protect
- HVAC Safe
