

DIRECTOR INPUT/ OUTPUT MODULE

MONITOR AND CONTROL MULTIPLE ALERT DEVICES

LIMITLESS CONTROL AND SECURITY POSSIBILITIES

The DIO Module is the intermediary between the CentrAlert Crisis-Driven Alert & Control (C-DAC) system and the CentrAlert line of DIO hardware.

It receives input from devices such as the Director Input/Output (DIO) Unit or Remote Control Panel (RCP) to initiate emergency response measures. It also outputs command strings to field devices to initiate control actions such as HVAC shutdown, unlocking of shelter doors, relay control, etc.

Full addressing schema provides immediate data on input location and provides the ability to group outputs for simultaneous control. Input and control devices may also be of third-party manufacture.

Operational Features

- Monitor and control multiple devices
- Send output codes to specific devices upon activation or deactivation of an action
- Compatible with multiple communication designs

Communication Pathways

- IP
- RS232
