

VIDEO NOW! MODULE

ASSESS SITUATIONS IN REAL TIME

REMOTE VISUAL SUPPORT ALLOWS INFORMED DECISIONS

Video NOW!™ provides real-time situational assessment by allowing users to capture video with a cell phone and send it directly to emergency management. For example, in the event of a dangerous equipment malfunction, an industrial worker could send live video to a supervisor providing valuable incident information. Video NOW! can be integrated into existing security systems or used with a smart phone video application for mobile situation assessment.

Video NOW! gives operators and field personnel the ability to assess situations in real time in areas that existing video systems may not cover. Emergency situations are fluid and take unexpected turns, but Video NOW! follows the event no matter where it goes.

Operational Features

- Import multiple live video feeds
- Integrates existing IP video systems
- Auto-activate actions with IR camera
- Ideal for real-time situational assessment
- Add additional video feeds in real time as events change

Typical Use Cases

Maintain situational awareness for:

- Hazard assessments
- Stadium security
- Active shooter scenarios
- Maintenance assessments
