

ACCESS PROTECT

STOPPING THE CRISIS IN ITS TRACKS

PROACTIVELY MITIGATING SITUATIONS IN REAL TIME

In many cases, a crisis can cause other unforeseen issues that prevent you from enacting your emergency management plan. One of the most common of these is difficulty in open or closing shelter doors. With Access Protect, C-DAC can lock and unlock shelter doors, enabling you to access or protect the places that matter.

If emergency response teams have trouble reaching restricted areas after an accident on site, C-DAC can cause shelter doors to unlock and/or open, allowing emergency vehicles and personnel to pass through. C-DAC can also initiate lock-down procedures to protect from an active shooter.

Operational Features

3090 Harrodsburg Road, Lexington, KY 40503 | 859.224.1047 | info@centralert.com | centralert.com

The CentrAlert® hardware line works seamlessly with our Crisis-Driven Alert & Control™ (C-DAC) software suite, providing both input activation controls and output notification devices. Our hardware products can also integrate third-party components for C-DAC control. Additionally, they can be installed as standalone devices for use where third-party controls are in place. We also manufacture custom devices - call CentrAlert for details.
