

BUILDALERT

DYNAMIC CREATION OF ALERT AND NOTIFICATION MESSAGES

BUILD. REVIEW. SEND.

While the Guardian User Interface is designed to instantly set off pre-built Actions, BuildAlert enables complex configurations to be entered using a touch-screen or mouse interface. This enables the Operator to create actions on the fly, allowing dynamic control of emergency alert and notification messages.

And the process couldn't be simpler. To create an alert, the Operator simply has to navigate through three windows where they will select Zone, Unit and Event from a pre-defined list. C-DAC will then automatically construct the message based upon these instructions.

BuildAlert then displays a final review before letting the Operator send or cancel.

Operational Features

- Scalable Button Interface for Quick-and-Easy Use
- C-DAC Automatically Builds the Desired Message Based upon Operator Selections
- May Be Used with a Touch-Screen Monitor or Keyboard and Mouse

3090 Harrodsburg Road, Lexington, KY 40503 | 859.224.1047 | info@centralert.com | centralert.com

The CentrAlert® hardware line works seamlessly with our Crisis-Driven Alert & Control™ (C-DAC) software suite, providing both input activation controls and output notification devices. Our hardware products can also integrate third-party components for C-DAC control. Additionally, they can be installed as standalone devices for use where third-party controls are in place. We also manufacture custom devices - call CentrAlert for details.
