

DIRECTOR INPUT/ OUTPUT MODULE

MONITOR AND CONTROL MULTIPLE ALERT DEVICES

LIMITLESS CONTROL AND SECURITY POSSIBILITIES

The DIO Module is the intermediary between C-DAC and the CentrAlert line of DIO hardware or third-party equivalent.

It receives input from devices such as the Director I/O-4 Unit or Remote Control Panel (RCP) to initiate emergency response measures. It also outputs command strings to field devices to initiate control actions such as HVAC shutdown, unlocking of shelter doors, relay control, etc.

Operational Features

- Monitor and Control Multiple Devices
- Send Output Codes to Specific Devices upon Activation or Deactivation of an Action
- Compatible with Multiple Communication Designs
- Full Addressing Schema Provides Immediate Data on Input Location
- Group Outputs for Simultaneous Control
- IP or Serial Communications

Paired Field Devices

- Director I/O-4 Unit
- Contact Closure Unit
- Remote Control Panel
