

HVAC SAFE

STOPPING THE CRISIS
IN ITS TRACKS

PROACTIVELY MITIGATING SITUATIONS IN REAL TIME

In many cases, a crisis can cause other unforeseen issues that prevent you from enacting your emergency management plan. One of the most common of these is difficulty in shutting off HVAC systems in order to prevent them from exacerbating another issue. With HVAC Safe, C-DAC can shut down HVAC systems if an H2S sensor indicates high gas levels, enabling you to protect your people and facilities from the secondary effects of a crisis.

Operational Features

- Prevent Spread of Hazardous Gas
- Configure HVAC Systems into Zones
- Open Exhaust Systems to Clear Hazard from Area
- Control Link via TCP/IP, Hardline, Custom API or Other Means

Paired Field Devices

- Director I/O-4 Unit
- Contact Closure Unit

Other CentrAlert Adaptive Intelligent Controls

- Dam Breach Detect
- Oil and Gas Alert
- Lightning Detection
- Access Protect
- Live Alert Protect
