

MESSAGE READER BOARD MODULE

VISUAL EMERGENCY AND INSTRUCTIONAL SOLUTION

REAL-TIME, CUSTOMIZABLE INSTRUCTIONS AT A GLANCE

Using the CentrAlert C-DAC system, you can communicate directly with any message reader board, whether supplied by CentrAlert or a third party. The MRB Module sends visual warnings and instructions to affected areas - ideal for areas with high noise levels.

Different messages can be broadcast to different areas simultaneously, allowing the operator to send the right message to the right people. Messages can be pre-scripted or developed in real time as the situation demands. MRBs are also able to broadcast text or graphics for improved comprehension.
