SOS SIREN MODULE
CONTROL ANY SIREN, ANYWHERE

CentrAlert®

DON'T LET A CRISIS BECOME A CATASTROPHE

The SOS Siren Module provides direct two-way controls with native Whelen protocols to any Whelen siren. The SOS Siren Module can also merge with third-party sirens where the protocol is available or be retrofitted with C-DAC protocols, allowing a common interface to multiple manufacturers.

This adaptability to a variety of siren setups means that the SOS Siren Module lets you quickly alert your affected areas using new or existing sirens. On top of this, the best-in-class scalability of the SOS Siren Module allows users to control both outdoor, community-wide systems as well as smaller, indoor facility systems, making it ideal for any organization.

Operational Features
- Click-and-Select Siren Activation
- Single, Group or Total Zone Activation
- Configure and Control Siren Attributes
- Supports Live or Pre-Recorded Messages as well as Voice-Capable Sirens
- Record and Store Messages in Real Time from Your Desktop
- Full Test Features
- Supports DTMF, FSK and Other Protocols
- Monitor All System Functions and Alarms
- Auto-Calculate System Availability and Immediately Notify Maintenance Personnel of Any System Alarms
- Full Reporting and Alarm Modules Included
- Affected Population Option
